EC values are total incl. tap water with 0.4 EC

This scheme is just a guideline. Many factors can influence the optimum fertilisation.

*Repeat in case of extra weeks

Instructions for mixing:

Foliar Bliss**: The use of Foliar Bliss is optional. Although we understand that foliar feeding is not always possible in every situation, we still recommend using it (10ml per liter). Foliar Bliss contains organic extracts that have a beneficial effect during the early flowering phase. To get an even better leaf nutrition you can mix it with Solid Green (1ml per liter). Spray twice a week and spray lightly, just before nightfall. Your plants will love it.
